

Staebel Slideezi with Handles

Product Code: 2104SH

The Staebel Slideezi with Handles need to be used in pairs and inserted under your patient in pairs, to help manoeuvre the client/patient up, down, from side to side and transfer with ease.

USER INSTRUCTIONS

1. Make sure that the brakes are on the bed/trolley before commencing a movement. Insert your Staebel Slideezi with Handles by either (a) 'log-rolling' the patient/client to one side (b) unrolling directly beneath the patient or (c) the method you have been trained in.

Please remember, it is recommended you cover the whole body to make handling easier. Here both sheets are 90cm wide x 200cm long Staebel Slideezi with Handles (top) and a Flat Slide Sheet without handles (bottom)).

2. **TO MOVE A PATIENT UP THE BED:** With the bed at a height that the carer can move the sheets without stooping or lifting the sheets, carers face the bottom of the bed and grasp the handles on the top layer at the hip and shoulder areas (as shown). Then the carers slide the top surface over the bottom surface in the direction of the headboard and the patient will slide up the bed.

NB: Carers – keep your hands gliding on the mattress, do not lift.

3. **TO MOVE A PATIENT DOWN THE BED:** Carers face the head of the bed and grasp the handles on the top layer at the hip and shoulder areas (as shown). Then the carers slide the top surface over the bottom surface in the direction of the feet and the patient will slide down the bed.

NB: Carers – keep your hands gliding on the mattress, do not lift.

4. **TO TURN A PATIENT: (a)** Carers face each other, agree which way they are turning the patient and then position the patient for turning. The carer to whom the patient will be turned, supports the patient as shown, helping to facilitate the turn and keep the patient in the centre of the bed. The carer who is turning the patient away from them, gathers the Flat Slide Sheets with handles close to the hips and shoulders, and gently pulls the Flat Slide Sheets with handles towards them, keeping the slide sheet level, not pulling up.

(b) The patient will then turn on their own axis and be positioned safely and centrally in the bed.

5. **REMOVING THE SLIDE SHEET:** Once the patient has been repositioned the slide sheets must always be removed unless clinical advice overrides this. TO REMOVE: Removal is best achieved by turning the outermost corners in on themselves and peeling the sheet out using a wriggling, alternate-arm action. This effectively 'peels' the sheet out without creating any shearing effects.

NB: When using two sheets, remove bottom sheet first.

6. Staebel Slideezi with Handles can be used for transferring from one surface to another provided they are either wide enough to reach without stretching or straps are added through the handles, as shown. When transferring you **MUST ALWAYS** use a lateral board to bridge the gap between the two surfaces, check that the brakes are on and holding and always ensure that the slide sheet is large enough to cover the patient from head to toe. (a) Always work with at least one other colleague. (b) Connect extension straps to the handles around the shoulder and hip areas. (c) Using coordinated commands, pull the patient smoothly across onto the other surface.

TECHNIQUES TO USE

- Always work at a good mattress height so you can slide the sheets on the mattress and NOT lift.
- Connect any straps for transfers at shoulders and hips.
- Always keep hands low and gliding – never lift.

TECHNIQUES TO AVOID

- Never lift the sheets – they will not work effectively.
- Never pull the sheet up – it won't be as effective.
- Never pull the sheet up in the air.
- Never hold the sheet away from your patient – always gather closely to the person.

FABRIC CONTENT

Fabric: 100% Polyester

Handles: Polypropylene

STORAGE AND HANDLING

- Store in a clean dry environment that is not subject to excessive heat.
- Keep away from sunlight.
- Store flat and avoid placing heavy objects on top of the product.

WARNINGS & PRECAUTIONS

- Do not leave or drop on the floor; it is a slip hazard.
- Test for slippiness before use. If over-laundered and doesn't slide please discard or replace.
- Inspect product, including handles, before use for signs of damage or tears.

CLEANING INSTRUCTIONS

- Wash as per laundry instructions.
- Can be wiped clean, between use with the same patient, with natural water and detergent or wipes that don't contain alcohol, solvents, bleaching or abrasive agents.
- Cleaning materials used should be patient safe and biodegradable.

DISPOSAL INSTRUCTIONS

- Non-recyclable.
- Dispose of as clinical waste if it has been used by an infectious person.
- Otherwise dispose of through normal waste management.

Keep Dry

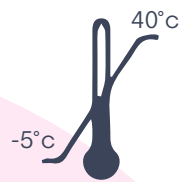

Keep away from direct
sunlight

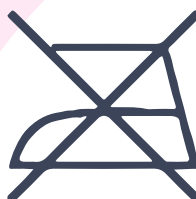

Caution

Do not use if
package is damaged

Storage Temperature
Limit

Wash at 40-74°C. Tumble dry on low heat. Do not Iron. Do not use bleach. Do not use fabric conditioner.
